

## ABSTRACT

5

In order to protect an angular movable or sideways bend-  
able hose, such as e.g. a protective hose for supply lines  
or cables, on a machine or robot against bending and there-  
fore premature wear, in the case of a device (1) for hold-  
10 ing such a hose (2), the invention provides at least one  
holding area (3) for the at least axial holding of the hose  
(2) and with at least one one-sided support area (4) sur-  
rounding the hose (2) and extending towards the free end  
(4.2).
